

UPT 315 Bilgisayar Kontrollü Unit Pump/Unit Injector Test Set (New-Yeni)

Standard Set

UPT315- Yeni versiyon test ekipmanı farklı eksantrik yapı ve ayarlana bilir aktarma mekanizması ile farklı bir test imkanı sunmaktadır. Bilgisayar kontrollü ile pompa ve enjektörlerin BIP değerlerini BOSCH orijinal değerlere göre karşılaştırma imkanı sağlamaktadır.

Test aşamalarını bilgisayar ekranında kontrol edebilmek ve BIP, DEVİR, BASTIĞI YAKIT, GERİ DÖNÜŞ YAKIT, SICAKLIK gibi değerlerin BOSCH orijinal değerlere, toleranslara uygun bir şekilde ekranda görebilme imkanı vermektedir.

Real BIP Value

Beginning of injection Period (BIP) values is an extremely important value for Diesel injection systems such that the injection system can operate with maximum efficiency and without any malfunction. UPT 315 can perform fast, effective and detailed BIP value measurement for all injector and pump types it can test.

Wide Range of Products

The product groups that you can test with UPT 315 include not only Bosch brand, but also Delphi and Cummins brands. Therefore, you don't need to buy additional test sets for each product brand, which makes UPT 315 a precious investment in your workshop.

Advanced Simulator and Test Database

With help of specially designed simulator and software, you can get the real values of injectors and pumps that UPT 315 can test.

The biggest issue in the Cam Box sets is the lack of an accurate, standart and reliable test database. UPT 315 solves this problem ; as well it offers a software/database that can be updated. Typing an injector/pump part number that you would like to test enough, you will get the test result on the screen which can also be printed.

Axle Height Options

Axle height options are necessary in order to get precise test results and calibrating injector/pumps. With the help of special software and adapters you will get any axle height you need.
